

Retrova

Project Overview

Retrova is a sustainable thrifting mobile application aimed at reducing over-consumption and promoting circular fashion. The app gives pre-owned clothing a second life by enabling users to buy, swap, and rediscover fashion pieces within a shared community, bridging the gap between past and present styles and transforming vintage items into modern self-expression.

The project emphasizes visual identity, UX/UI design, and brand language, translating the concept of “second life” into color systems, typography, layouts, and interaction flows. It highlights conscious consumption, community exchange, and environmental impact, positioning fashion as an ongoing cycle rather than a disposable trend.

Team Members & Roles

- **Merna Mohammed Ahmed Elmounir** - Team leader & UI/UX Designer (creates visual websites and apps)
 - **Salma Ahmed Mohammed Awadallah** - Social Media Designer (creates posts and campaign visuals)
 - **Alaa Magdy Ahmed Mohamed** - Illustrator (creates hand-drawn elements, icons and sketches)
